

# Dashboard Overview

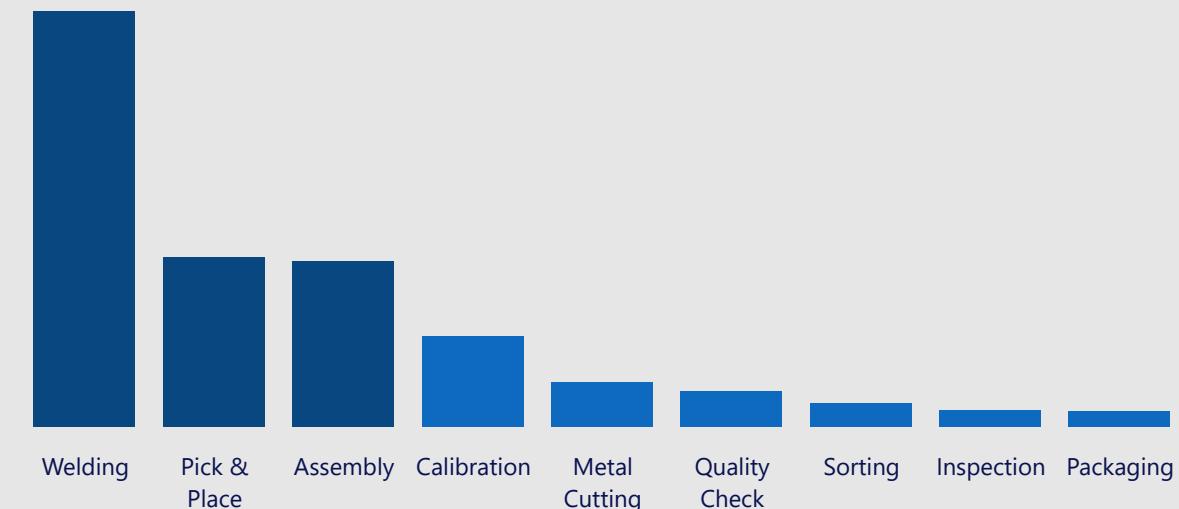

This dashboard uses real-time data integration with MySQL, focusing on mechanical telemetry and production metrics generated by robotic and industrial equipment. It integrates data related to task execution, torque applied on joints, acceleration profiles, machine models and operational status, providing a consolidated analytical view for performance evaluation and process monitoring.

FLA-2019

FLA-2025

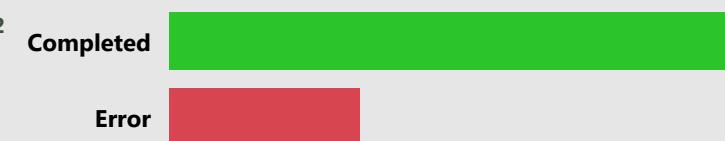

## Task Duration Avarage (Sec)

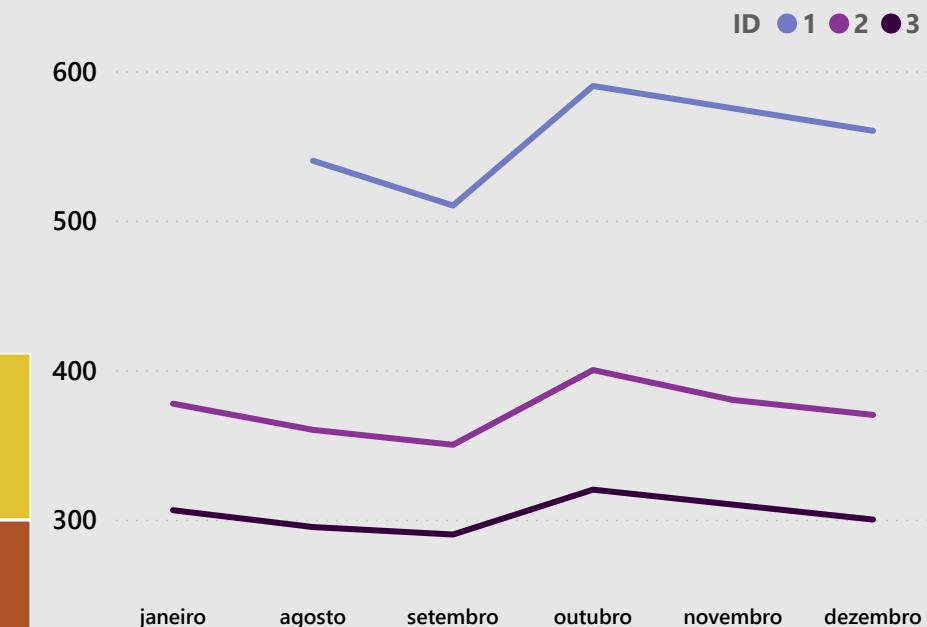

## Torque Average per Joints

## Task's Status

## Speed Average by Month

## Acceleration Avarage by Model
